- ❖ IT is networking site for web professionals
- ❖ FORK , PULL , MERGE.

Git Congif

Every new OS(Window) install / fresh setup:

1. git download - <https://git-scm.com/downloads>
2. git config --global user.name "User Name"
3. git config --global user.email "useremail@gmail.com"
4. when we will push code very first time (login popup will appear - you have to be login with your GitHub credentials)

Git Commands

- ❖ `git clone https://github.com/umairazmat/SMIT-WMA-6-A`
- ❖ Every new project start (which is created in your local):
 1. `git init`
 2. `git add .`
 3. `git commit -m ""`
 4. `git remote add origin "Repo Link"`
 5. `Git push origin master`
- ❖ repeat every time when we change anything:
 1. `git add -A`
 2. `git commit -m "first commit"`
 3. `git push origin master`
